

AI Lead Intake & Booking System

GoHighLevel + LiveKit | Demo Project | Timeline: 2 Weeks

Overview

An AI-powered chat and voice assistant embedded on any business website that engages visitors instantly, qualifies them with industry-specific questions, captures contact details, creates the contact in GoHighLevel CRM, checks real-time calendar availability, and books an appointment — all within a single conversation, with zero human involvement. Confirmation and reminder sequences fire automatically.

Problem & Solution

Problem: Businesses lose 40%+ of website leads because forms get abandoned, chats go unanswered, and follow-up is slow. **Solution:** A conversational AI (text or voice) that responds in under 3 seconds, qualifies the lead, and converts interest into a booked appointment on the spot.

Core Features

- AI chat widget + one-click voice mode ("Talk to us") on any website
- Conversational lead qualification (budget, timeline, service needed)
- Automatic contact creation in GHL with tags, custom fields & lead score (hot/warm/cold)
- Real-time calendar availability check and direct appointment booking mid-conversation
- Instant SMS + email confirmation; automated 24hr & 1hr reminders; no-show recovery
- Full conversation transcript saved to the contact record; human handoff on request

Technology Breakdown

GoHighLevel (CRM & Automation)	LiveKit (Conversational AI)
Contacts API — create/update leads with custom fields & tags	Agents framework — AI conversation runtime (voice + chat)
Calendars API — free-slot lookup & appointment booking	Voice pipeline — STT (Deepgram) → LLM (Claude) → TTS
Pipelines & Opportunities — auto stage placement	WebRTC rooms — browser mic connection, no phone number needed
Workflows — confirmations, reminders, no-show & abandoned-chat recovery	Function calling — agent invokes create_contact, get_free_slots, book_appointment
Conversations/Notes API — transcript logging; Webhooks — reschedule sync	Turn detection & interruption handling; session recording for demos

Custom Middleware (Our Build)

A lightweight Node/Python service connecting the LiveKit agent to GoHighLevel: tool functions for contact creation, slot lookup, booking, lead scoring and transcript logging; GHL API auth & rate-limit handling; webhook receiver for reschedules/cancellations. Hosted on Vercel/Railway free tier.

2-Week Build Plan

Week 1 — Core Pipeline	Week 2 — Polish & Demo
GHL sub-account setup (calendar, pipeline, workflows) • LiveKit agent scaffold • GHL API tools (contact, slots, booking) • End-to-end test: chat → contact → booking → SMS • Voice mode (STT/TTS)	Lead scoring + transcript logging • Reminder & no-show workflows • Website embed widget • Record 2-3 industry demo conversations • Analytics view • Case study + demo video for Upwork

Expected Demo Outcomes

Working live demo (chat + voice) embeddable on any site • Lead visible in GHL within seconds of conversation • Booked appointment with automated confirmations • Recorded demo conversations across 2-3 industries • Portfolio-ready case study positioning us as AI + CRM integration specialists for Upwork bidding.
